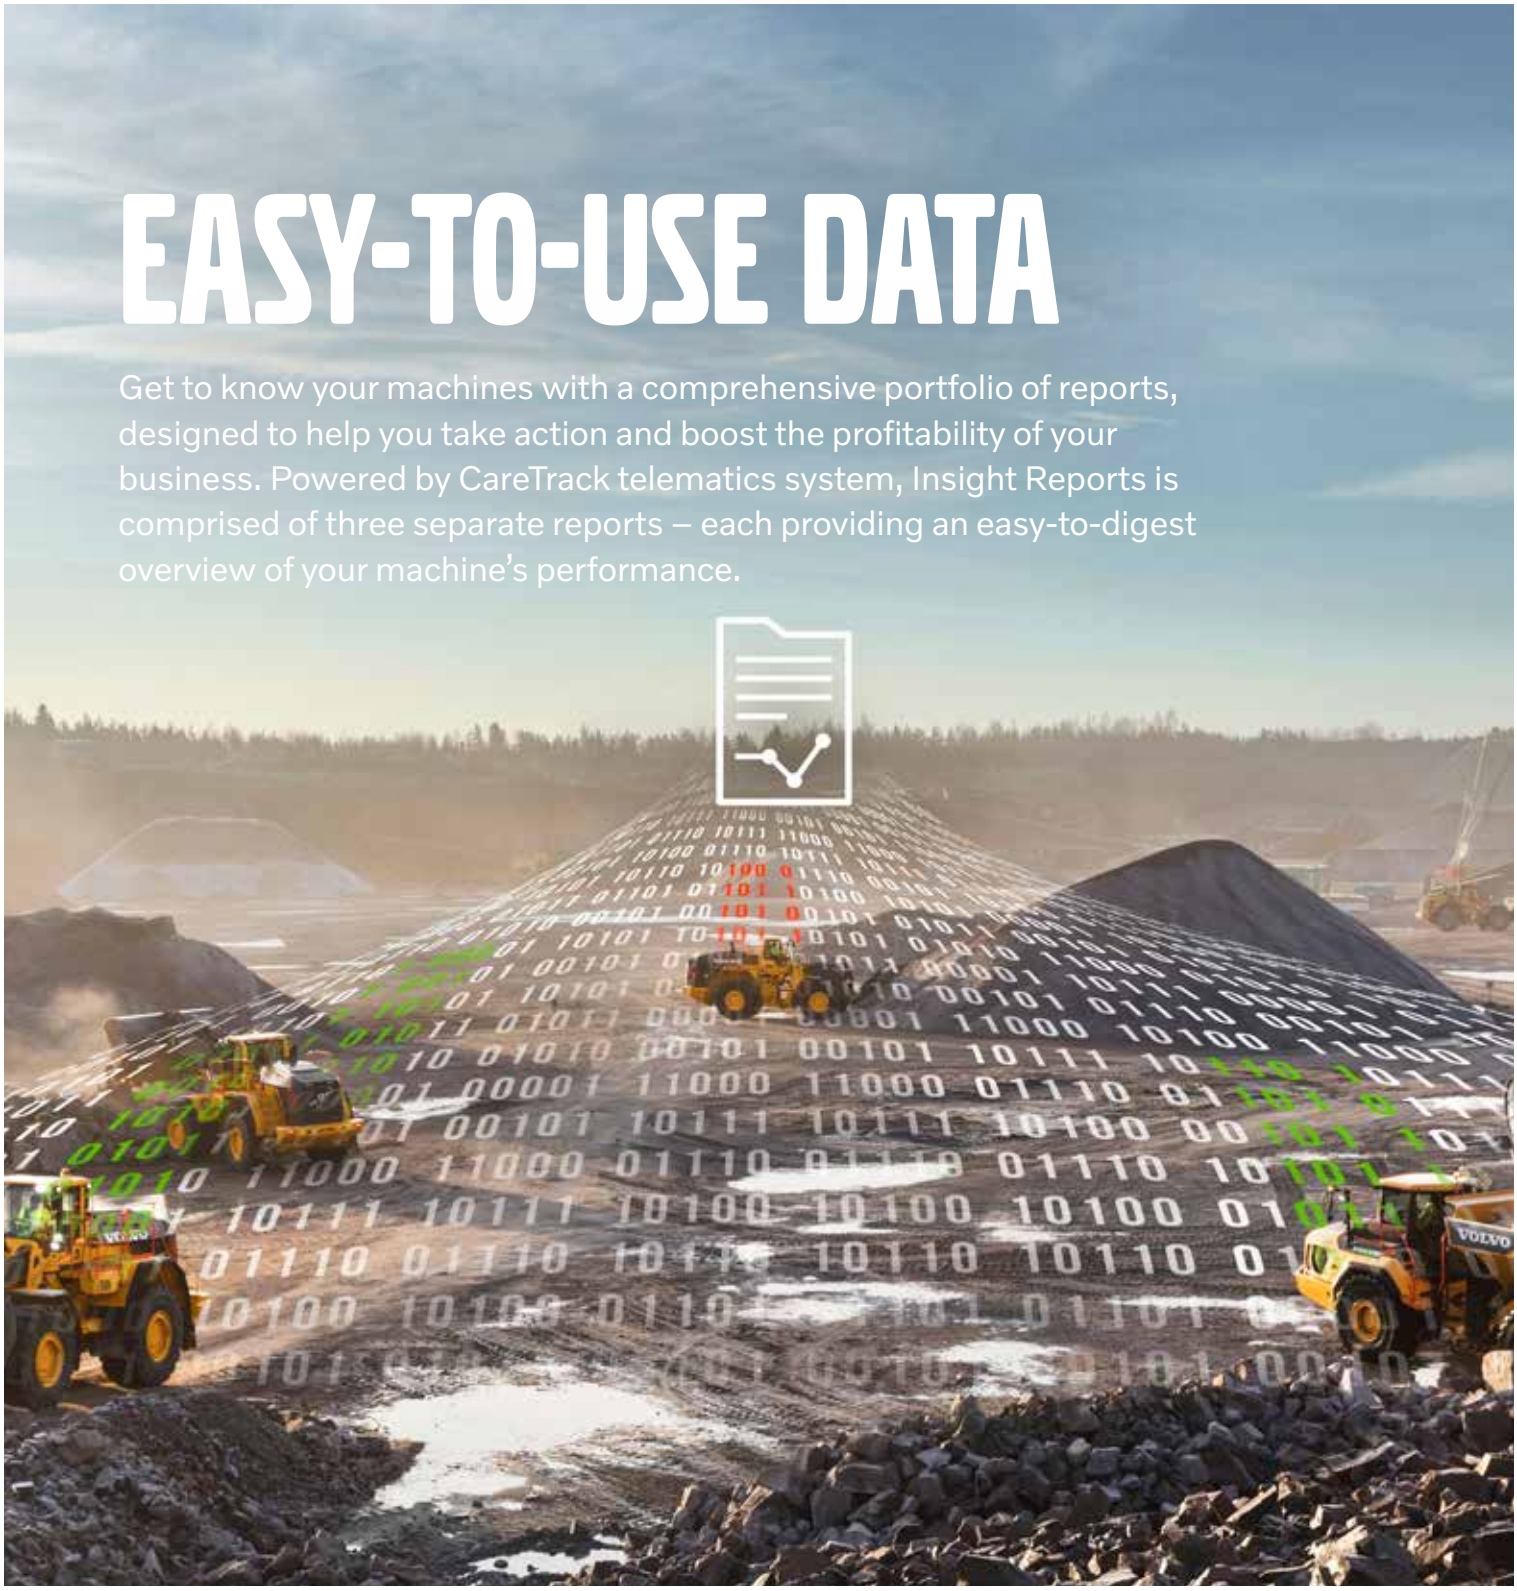
INSIGHT REPORTS

Data made easy, saving time and money

EASY-TO-USE DATA

Get to know your machines with a comprehensive portfolio of reports, designed to help you take action and boost the profitability of your business. Powered by CareTrack telematics system, Insight Reports is comprised of three separate reports – each providing an easy-to-digest overview of your machine's performance.



Why choose Insight Reports

Save time and money

Data overload is an inevitable part of telematics adoption. You can either spend hours analyzing the mountains of data produced, or offload it onto us. Our dynamic system automatically compiles data into ready-made reports. No more need to sift through complicated data. Clear and comprehensive, the reports help break data down to size – saving you time and money.

Actionable insights

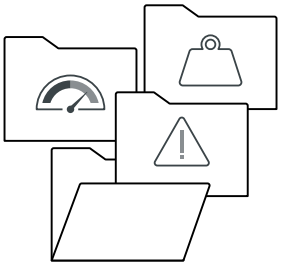
Be better equipped to evaluate your fleet's performance.

With insights into the health, efficiency and productivity of your machines, the reports help make informed decisions and identify ways to reduce operating costs.

Insight Reports video

"Are you keeping track of your fleet?"

The right report for you



Whatever your need, we have a portfolio of reports to choose from. Our reports come in different versions and can be adapted to suit your company's structure.

Everything, at a glance

Summary Report provides a snapshot of key information related to the health, efficiency and productivity of your machines. Should you require more details, consider our selection of dedicated reports.

Keep your machine in top shape

A dedicated report helps you detect unwanted machine conditions and operating behaviors, and prompts what corrective actions need to be implemented to reduce unnecessary strain.

Identify any inefficiency

Fuel Efficiency Report is structured to help you reduce the industry's number one operating cost: fuel. Find out if your machines are idling too much or causing unnecessary fuel expenses, and make sure you're on track to meet your objectives.

Monitor your production

Productivity Report tracks the volume of material handled, per hour or per liter. With clear insights into your fleet's productivity, you can calculate your cost per tonne and better control your operating costs.

How it works

• You, together with your dealer, set the structure of the reports according to your organization's framework and specific areas of interest.

• Machine data points are captured via CareTrack.

• The Volvo system automatically compiles the information into an easy-to-read pdf report, sent to your inbox on a regular basis: weekly for detailed reports and monthly for an overview. Data is also available in excel and csv format should you wish to perform further analysis.

More to offer

You're clear on the benefits, but want some further guidance on putting ideas into practice? Get support from your local Volvo dealer to develop a plan to increase performance.

Go even further – you can request advice on the best training methods to avoid instances of machine misuse.
