Dynamic perfection.

**Bergmann
C912s.**
Production in harsh
environment.

There is always a way.

This is the safest and most comfortable way:

Even if the terrain is delicate, wet or particularly steep. The Bergmann C912s can master any site with ease. With its rubber or steel tracks and optimum weight distribution, the track dumper boasts a higher transport capacity, going beyond the limits of a wheel dumper. As a logical development of the Bergmann C815s, the C912s is designed as a highly effective and efficient transport vehicle for continuous use.

The Bergmann comfort cab, with its optional 180° rotating operators console and swiveling dump body, combines stability and a good visibility, makes time-consuming turning and tipping maneuvers unnecessary, and significantly increases occupational safety in challenging environments.

With a speed of up to 9.9 mph the C912s can carry out more transport cycles and work effectively on any site.

The distribution of weight along the tracks significantly reduces the pressure on the ground and preserves the terrain.

Reliable operation for many years:

- Landscaping
- Hydraulic engineering
- Trench and road construction
- Sports ground construction
- Landscape design
- Recultivation
- Pipeline construction

The central electrical system is easily accessible at all times.

Cabin with optional 180° rotating operators console and intuitive operability.

Everything always under control.

Efficient, agile, strong.

Work safely and comfortably

The top quality comfort cab is the biggest in its class. It is equipped with an air-suspension seat and an optional 180° rotating operators console. For the best overview and maximum safety.

Low emissions

Equipped with the latest generation Cummins diesel engine, the Bergmann C912s meets the stringent criteria for level 5 emissions standards.

Fit for any surface

In addition to the tried and tested rubber tracks, steel tracks are also available for use on tough rocky terrain.

Hydraulic clamping mechanism

For optimum track tension during and after use – and to optimize durability.

A range of versions

Just the right design for your application. Choose from rear dump, swivel dump, flatbed, tank, spreader incl. optional quick change systems for flexible year-round use.

High stability

The position of the drive system in the rear of the vehicle ensures optimum weight distribution and a low center of gravity. The hydraulic parking brake secures the machine even on the toughest terrain.

Modular and powerful

The modular, interchangeable two-stage planetary gear transfers maximum thrust and, at the same time, minimizes fuel consumption and potential subsequent costs.

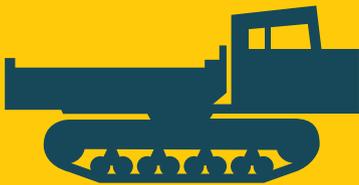

Robust drive

The drive is fitted with oscillating track rollers.

Superior production and low ground pressure.

You know their machine, right?

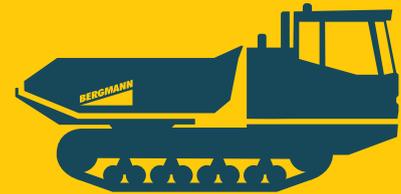

Conventional top-slewing dump truck

Stability

Rather than shifting the machine's center of gravity, the swivel seat and the swiveling dump body provide the best possible stability and maneuverability on difficult terrain.

More power.
More safety.
More comfort.

You should know this one!

Bergmann C912s

Overview

The driver can look, drive and tip all in the same direction. Material can be distributed as ideally as possible thanks to the 180° work radius.

Operating costs

The optimum combination of tare weight and weight distribution ensures lower operating and wear costs.

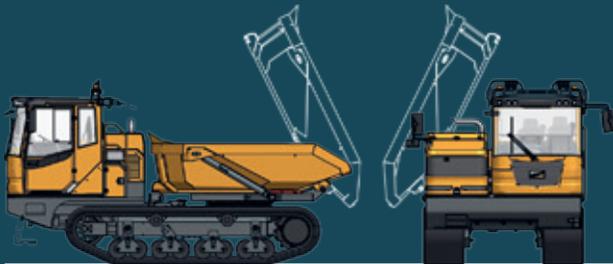

It's simple – get more from tracks.
Bergmann C912s. Test one now!

Technical specifications

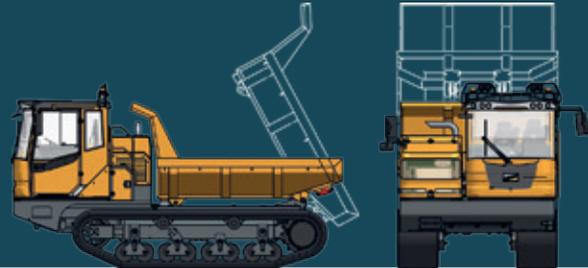

Bergmann C912s with swivel dump

Payload	10,000 kg	22,046 lb
Capacity heaped	6.5 m³	8.5 yd³
Total length	6,246 mm	20.49 ft
Total width	2,900 mm	9.51 ft
Clearance height without beacon light	3,050 mm	10.01 ft
Ground clearance	613 mm	2.01 ft
Dumping height	1,058 mm	3.47 ft
Load height (front)	1,670 mm	5.48 ft
Engine power	180 kW	241.38 hp
Empty weight	14,850 kg	32,738 lb
Ground pressure	< 500 g/cm ²	< 7 PSI

The agile powerhouse. For the special duties.
